

## SafeWater Networks places repeat orders for LiB Solutions

### Gangadhara

### Manakondur

We are living in a very exciting time where governments, Industries, commercial users and residential owners - all are consciously looking forward to adapt renewable energy to bring sustainability and efficiency in the way they deal with energy.

We thank our prestigious customer **SafeWater Networks** to provide us repeat order of our EcoGrid System integrated with Solar Energy for their **Telangana sites**.

They are our brand ambassadors and have been happy with the performance of the system which was installed a year back at a remote village in UP – Charoli where people were in dearth of potable water.

With this installation, they have enabled more than 500 families to get drinking water at ease.

At ACME, our dream is to power the world with renewable energy.

We are committed to provide comprehensive distributed renewable energy solutions across the range of challenging environments, businesses and governments.

We feel proud of our LiB System installations that have been executed for **Indian Defence Establishments in High Altitude Areas (HAA)** to ensure comfortable living conditions to occupants along Indo-Pak and Indo-China borders with **Low Ambient Temperatures**.

These systems were installed as hybrid back-up power source in integrated shelters in most forward formations. ACME has installed more than **320 kWh** of Lithium-ion based Energy Storage Solutions for **Military Applications**. The technology introduced by ACME is working seamlessly and significant saving in fossil fuel is observed in these locations.
