

ACME Group on winning of RUMS bid – 250 MW

“On the occasion of winning 250 MW capacity in RUMS tender at REWA, Madhya Pradesh, we would like to thank Government of India along with their entities and MNRE for creating an enabling atmosphere and positive environment for Solar Power Developers to be able to create values to all the stakeholders.

Our special thanks to Government of Madhya Pradesh along with their entities, MPUVNL (Madhya Pradesh Urja Vikas Nigam Limited) and IFC (International Finance Corporation) for designing a wonderful RfS after taking along all the views and concerns of the industry. We would also thank RUMS for their facilities promised which is one of its kind and at very competitive rates.

I am sure we will get continued support from all the Government entities and other concerned departments in creating this wonderful endeavour which will benefit all the stakeholders and specifically the end consumers.

This is going to be the first time in the history that the tariff of electricity based out of Solar Power Plants is going to be at sub 3 level.

We could achieve this feat only because of our strength of knowledge and understanding of the domain, very dynamic and knowledgeable team, execution excellence and our belief that benefit of all technological innovations should ultimately be passed to the ultimate user. We are sure that once this plant gets operationalized after 18 months, it would be engineering marvellous.

We are a technology driven company and believe in embracing new and innovative technologies which ultimately creates value for the society at large. We shall continue to do so and **we shall be known as the company who believes in ‘Leading through Innovations’**”.
